

IN THE SPECIFICATION

Applicants bring to the Examiner's attention that a substitute specification was voluntarily filed in this application on or about October 16, 2000. Accompanying the substitute specification was a marked-up (i.e., interlineated) copy of the original specification showing the matter added-to and the matter deleted from the specification.

With respect to paragraph 3 of the current Office Action, Applicants note that the reference numbers in parentheses were deleted from the abstract of the disclosure in the previously filed substitute specification described above.

With respect to paragraph 4 of the current Office Action, Applicants note that the related U.S. Patent Application serial numbers were provided in the previously filed substitute specification described above.

IN THE CLAIMS

Please amend the claims as follows:

1. (Amended) A method for controlling a computer with recorded information of a digital video disk, comprising;
- embedding a unique code in digital recorded video information of the digital video disk, the unique code in close association with vendor information;
- operating the video disk at a user location disposed on a network to read the digital recorded video information therefrom and outputting the read digital recorded video information on a display at the user location;
- extracting the unique code with an extractor during output of the digital recorded video information to a user at [a] the user location [disposed on a network];
